MAIN OFFICE AND FACTORY

1943-45 PITKIN AVE.,

BROOKLYN, N. Y.

---

HOT GALVANIZING, PLATING & JAPANING WORK DEPT.

228-238 NEWPORT AVE.

BROOKLYN, N. Y.

EXTRACT FROM LAW IN EFFECT JULY 9, 1910-11

---

Sec. 2. That motor boats subject to the provisions of this Act shall be divided into classes as follows:

Class 1. Less than twenty-six feet in length.

Class 2. Twenty-six feet or over and less than forty feet in length.

Class 3. Forty feet or over and not more than sixty-five feet in length.

Sec. 3. That every motor boat in all weathers from sunset to sunrise shall carry the following lights, and during such time no other lights which may be mistaken for those prescribed shall be exhibited.

(a) Every motor boat of class one shall carry the following lights:

First. A white light aft to show all around the horizon.

Second. *A combined lantern in the fore part of the vessel and lower than the white light aft showing green to starboard and red to port, so fixed as to throw the light from right ahead to two points abaft the beam on their respective sides.*

(b) Every motor boat of Classes 2 and 3 shall carry the following lights:

First. A bright white light in the fore part of the vessel as near the stem as practicable, so constructed as to show an unbroken light over an arc of the horizon of twenty points of the compass, *so fixed as to throw the light ten points on each side of the vessel, namely, from right ahead to two points abaft the beam on either side.* The glass or lens shall be of not less than the following dimensions:

Class 2. Nineteen square inches.

Class 3. Thirty-one square inches.

Second. *A white light aft to show all around the horizon.*

Third. On the starboard side a green light so constructed *as to show an unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side.* On the port side a red light so constructed as to show an unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side. The glasses or lenses in the said side lights shall be of not less than the following dimensions on motor boats of—

Class 2. Sixteen square inches.

Class 3. Twenty-five square inches.

*On and after July first, nineteen hundred and eleven, all glasses or lenses prescribed by paragraph (b) of section three shall be fresnal or fluted.*

Size of glass in Class 1 lights:

7. The law does not specify the size of lights to be carried on motor boats of Class 1. Such lights should be large enough, however, to accomplish the purpose intended, and it is suggested that the illuminated portion of such lights or lenses should not be less than three inches in diameter.

## FOREWORD

THIS CATALOGUE we present you herewith is our latest. We have endeavored to make same complete, compact and yet unwieldy. Compiling same has been a source of pleasure, though meaning many days and nights of hard work.

We are frequently putting new articles on the market. If your wants do not appear in these pages write us. We will be pleased to answer all your inquiries.

These prices are list prices and are subject to a discount to the trade.

WE TAKE THIS OPPORTUNITY to again call your attention to OUR ORIGINAL FRESNAL LENSES. DO NOT USE any IMITATION fresnal lenses. DEMAND ONLY THE BEST.

Thanking our many friends for their loyalty to us and trusting to be favored with their continued support, we remain

Yours very truly,

PERKINS MARINE LAMP CORPORATION.

## NOTICE

**TERMS:** 2 per cent. 10 days, or 30 days net.

Bills unpaid at the expiration of 30 days subject to interest and draft at sight.

Where prices are omitted, either in the Catalog or Discount Sheet, they will be furnished on application.

All prices subject to change without notice.

Prices are f. o. b. factory.

Our responsibility ceases as soon as goods are delivered at the Railroad or Wharf, and receipts taken for the same in good order.

We do not insure goods unless so instructed.

When ordering please specify figure number or article number and size wanted.

**NO CREDIT ALLOWED** for goods returned without **OUR CONSENT.**

THE NORWEGIAN REGULATION RUNNING LIGHTS

(Guaranteed to pass the British Board of Trade [Lloyds])

These Lanterns are manufactured according to the specifications of the British-Norwegian or Foreign Countries Laws and Regulations.

Construction of Side Lights: Back doors, sliding founts, Cosmos burners and chimneys, round wicks, high polished nickel plated reflectors, clear (white) Fresnal lense (Dioptric lense) with solid colored inside shade glasses, corresponding to lantern with brass frame or shade, cast iron T back piece (bracket) on side lights.

Masthead Light is constructed the same way with exception it has the lugs on the sides and no colored shade glasses.

Stern Light is also constructed the same way with exception that instead it has side brackets and has no colored shade glasses.

Anchor Light has the hinge top lugs on the sides and trimming same as the other lights above stated.

Galvanized Lights are formed up from black steel and galvanized by hot process (spelter) after formed. No chance to rust. Burns Combination Oil and Electric.

THE ENGLISH REGULATION IMPROVED RUNNING LIGHTS

(Guaranteed to pass the British Board of Trade [Lloyds])

These Lanterns are manufactured according to the Rules and Regulations of the British Board of Trade Specifications, known as Lloyds' Requirements, or Steamship Navigation Laws.

These Lanterns are very heavily constructed and are the only Lantern of its kind. The side lugs are riveted, the hinged top has heavy brass hinges, riveted and soldered. Lock made from brass, smoke chimney riveted, etc.

The Galvanized Lights are formed up from black steel and galvanized by the hot process (spelter) after all formed up, making same like one piece, and no chance to rust.

The burner used is the English cone burner, English cone chimney, heavy nickel plated reflector and wick.

The Side Lights have the solid colored shade glasses to correspond with the lantern, with T back piece (bracket).

Burns Combination Oil and Electric.

Lenses used are American made, finest quality, known as Fresnal or Dioptric Lense.

THE GLOBE, SIGNAL OR DISTRESS LIGHT

These Lights are heavily constructed, using finest grade American globes. Colored globes are solid colors, ventilated ring top, heavy guards. Brass clips fastened and soldered around wires where wire meets, with smoke shields, brass convex burners, guy rings. The 8-inch Globe Lanterns are constructed with snap spring founts and hinge bottoms; 6 and 10-inch sizes have the famous swivel or screw founts.

Burns Combination Oil and Electric.

Fig. 108a

Fig. 109a—THE "PERKO" BEACON ACETYLENE LIGHT.

Burns 30 to 60 days.

The "Perko" Marine Beacon is a fixed acetylene gas light, which burns continuously for a number of days without attention. It is employed as a marker for channels, anchorages, landings, bridges, fish pounds and other points where a far-reaching, dependable light is required at all times.

The Beacon consists of a storm-proof Marine Lamp having a Fresnel Lens, supplied with gas from a steel storage tank which is held in a strong galvanized steel frame, firmly attached to a pile, pole or buoy. A specially designed burner gives a long pencil-like flame within the lens, the rays of which are concentrated horizontally so as to be visible up to a distance of five miles or more, according to requirements. The lens is furnished either in red or white glass.

"Perko" Marine Beacons are made in any size and candle power and for any burning period required.

The standard size of fish pound beacon burns 30 days on a single cylinder of gas without attention. Other special fish pound beacons are also made to burn 20 days and 60 days. These fish pound beacons especially conform with the Government's recent requirements.

Arrangements are made for recharging the gas cylinders used on these beacons, so that there is no cost beyond the initial purchase price, except for actual gas consumed.

Price each, without Tank Clear.....	\$180.00
Price each, without Tank, Ruby Globe.....	189.00

The following signals we guarantee to cover law in confirmation with new rules taking effect September 1, 1914. All of our Day Shapes are made of highest grade material and can be folded up when not in use and stowed away in a very small space.

RULE No. 1—For vessels having submerged objects in tow, shall display in daytime one No. 1 shape and one No. 2 shape, and in the night, in addition to regulation lights, two Red No. 7 and two White No. 6 Towing Lights.

RULE No. 2—For all style vessels fastened alongside of wrecks, or moored over a wreck, two of our No. 2 shapes are required during the day, and at night two of our No. 6 White and two of our No. 7 Red Towing Lights.

RULE No. 3—Dredges in stationary positions require two of our No. 3 Red Balls during the day, and at night two of our No. 6 White Towing Lights and two of our No. 7 Red Towing Lights.

RULE No. 4—For Self-Propelling Suction Dredges under way with their suction in the bottom, require during the day two of our No. 5 Black Balls, and during the night, in addition to regulation lights, two Red Mast Head Lights and two special Four Point Red Lights.

RULE No. 5—For vessels which are moored or engaged in laying pipe on submarine construction during the day, one No. 4 Black and White Ball and one No. 3 Red Ball, and during the night three of our No. 7 Red Towing Lights.

THE PERKO IMPROVED OIL SYRINGES FOR OIL GUNS.

Highly Polished Brass Finish. 1¼" diameter, 8" long.

No. 32b

Fig. 230a

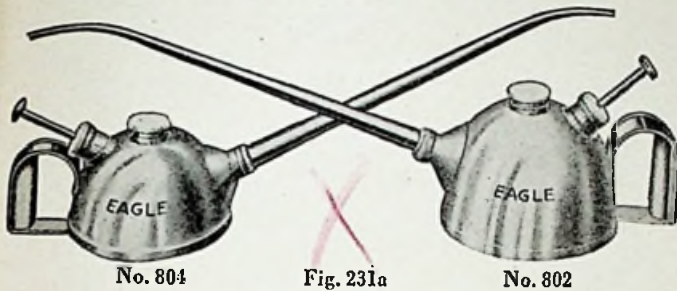

A very useful tool for any engineer. Will suck up oil from a drip pen or from a can. Will handle thin or heavy oil equally well. Has double Plunger. One set pulls up the oil; the other forces it out. Will last a lifetime. Any other size or style made to order.

Price Per Dozen ..... \$36.00

### THE PERKO EAGLE AUTOMOBILE PUMP OILERS

These Oilers were designed for automobiles, power boats, etc., but are equally useful around any machinery. Every shop should have these cans among its oiling equipment. No place is so difficult that it cannot be reached with this can. By the use of the thumb plunger any quantity of oil can be delivered in any position. Strainer prevents clogging of valves and spout. Spouts are interchangeable.
